Hotel Booking Assistant Using Bedrock and DynamoDB

Build an intelligent Hotel Booking Assistant powered by AWS Bedrock Agents, Lambda functions and DynamoDB that accepts natural language inputs like "**I want to book a room from July 10 to July 12 for 2 people**" and perform the below :

1. Checks room availability in real-time based on check-in/check-out dates and number of guests.
2. Provides information on existing bookings
3. Initiates a booking & provides a booking confirmation to the end user.
